Categories: [Mercury Engines](#), [Motors](#), [Outboard](#)

Product Description

High-Output Alternator

A powerful alternator - 60 amps on the 150hp outboard and 35 amps on 75 to 115hp outboards - helps keep batteries charged and your onboard electronics running all day.

Command Thrust Gearcase

Available for the 90 and 115hp outboards, the Command Thrust gearcase is designed to turn larger props. It helps get heavy boats on plane more easily and hold them there at lower speeds without impacting top speed.

Electronic Fuel Injection (EFI)

From the moment you crank the engine to the moment you drop the throttle, EFI technology responds with instant power. Surefire starting in all weather conditions. Smooth, efficient acceleration. Maximum capability.

Extra Charging Power

Idle charge battery-management technology on the 150hp engine automatically increases idle rpm to boost

alternator output and recharge low batteries.
